

## Optimising MASH decision-making and reducing risk

Sentinel's unique, integrated data hub solution supports key MASH requirements seamlessly and in real time.

Enhancing collaborative working and decision-making, the Hub collects and merges data that core partners have agreed to share. It then stores the information securely, enabling it to be accessed as soon as a referral is received.

**The breadth and depth of cross-agency data held by the Hub reduces risk and potentially saves lives by helping MASH co-ordinators to:**

- ▶ Quickly identify the right child
- ▶ Access all known family and case information
- ▶ Prioritise urgent cases
- ▶ Liaise effectively with the relevant individuals in agency support teams
- ▶ Take the correct decisions

The Hub enables MASH teams to take action without receiving referrals as it can automatically alert them to increased risks based on data scenarios and rules that they define. Sentinel's system also provides a complete audit trail with user-friendly scorecards providing full visibility of the status of every referral or live case and enabling response time SLAs to be easily monitored and managed.
